

Review

- The system was designed poorly. There was no description of what this website is about as well as lack of information in each section.

I have implemented the description of the website when hovering, which shows more information about the city.

- The overall including the font, choice of colors, images looked boring. It would be hard to attract people to discover more about the place you're trying to promote.

- In "Weather" section, it would be better to use more images or charts to describe how's the weather like in Hue instead of a table.

I have implemented a picture about the weather. I will add more later.
